

Kazakhstan Counterparty Russia-Diversion Risk Report

Sample client-facing report for process validation

Counterparty	KTE.KZ LLP / TOO KTE.KZ
BIN	181040024807
Country	Kazakhstan
Website	https://ktekz.kz/en/
Date	2026-05-07
Prepared as	Open-source risk intelligence memo for internal compliance review

This report is not legal advice, not export classification, not a sanctions legal opinion, and not a guarantee that a transaction is permissible.

1. Executive summary

Based on limited open-source review, KTE.KZ appears to be a Kazakhstan-registered company with a public website describing supply/import of electronic and electromechanical components, industrial automation systems, fiber-optic communication line components, and wireless communication components.

No direct sanctions or adverse web hits were observed in the limited checks performed for this sample. However, the product categories associated with the company can be sensitive from a Russia-diversion perspective depending on exact goods, HS code, ECCN, end user, and shipment route.

Risk dimension	Rating	Rationale
Counterparty/entity risk	Medium-low	Public footprint and 2018 registration reduce some common red flags, pending full API screening and ownership/address verification.
Product/shipment risk	Medium to High	Electronics, telecom, industrial automation, fiber-optic/wireless components can be sensitive depending on exact specs, HS/ECCN, end user, and route.
Data completeness	Medium-low	Sample used open sources and limited checks. Production report requires complete CSL, OFAC, OpenSanctions, and product/shipment data.

Recommended action

- Request enhanced documentation before shipment.
- Escalate to export-control counsel if goods fall under BIS Common High Priority List categories or if end use/end user is unclear.
- Do not make a shipment decision based only on company-name screening.

2. Scope and limitations

This sample review used open-source checks against the company website, Kazakhstan counterparty information pages referencing BIN 181040024807, limited OFAC XML partial local search, limited exact-match web/adverse searches, and public import-data visibility indicators.

Production-grade reports should include complete screening through Trade.gov Consolidated Screening List API, full OFAC SDN and consolidated list mirrors, OpenSanctions API or dataset matching, EU/UK sanctions lists where relevant, and more complete Russian/Kazakh/English adverse media search.

3. Entity snapshot

Legal name	TOO KTE.KZ / KTE.KZ LLP
BIN	181040024807
Registration date observed	22.10.2018
Public location	Almaty, Kazakhstan
Address observed	Kurmangazy str. 48A, Almaty

Head/director observed	Kozulin Kirill Aleksandrovich
Website	https://ktekz.kz/en/
Phone shown	+7 771 980 4757

Sources: ktekz.kz, PRG Business Analyst, Adata public page, Uchet public page.

4. Business and product profile

The company website states that KTEKZ was established in 2018 in Almaty, Kazakhstan and focuses on the supply of components for manufacturers of electronic equipment.

- Electronic and electromechanical components.
- Industrial automation systems.
- Components for fiber-optic communication lines.
- Components for wireless communication.

These categories are not automatically prohibited. However, they can overlap with sensitive or dual-use categories depending on exact specifications. For a U.S. exporter, product-level review is essential before shipment.

5. Evidence and red flags

Finding	Risk relevance	Source / confidence
KTE.KZ website describes supply/import of electronic and electromechanical components, industrial automation, fiber-optic and wireless communication components.	Product categories may overlap with dual-use or high-priority items depending on exact specs.	ktekz.kz/en/ — Medium
Public pages identify BIN 181040024807 and Almaty registration; PRG shows registration date 22.10.2018.	Predates Feb 2022, reducing one common shell-company red flag.	PRG, Adata, Uchet — Medium
PRG page lists OKED 62011 software development while website emphasizes component supply/import.	Activity mismatch requires explanation/documentation before shipment.	PRG + website comparison — Medium
No exact-match adverse/sanctions web results observed in limited searches.	No direct adverse signal in lightweight search, but not complete screening.	DuckDuckGo exact queries — Low/Medium
OFAC XML live download timed out; partial local search found no direct KTE.KZ/BIN match.	Incomplete source coverage. Production workflow must use local OFAC mirror.	Partial OFAC SDN XML — Low

6. Recommended follow-up before shipment

- Final end user and end-use statement.
- Product list with manufacturer part numbers.
- HS code and ECCN/export classification where available.

- Confirmation whether goods will remain in Kazakhstan.
- Shipping address, freight forwarder, and Incoterms.
- Payment party and bank details.
- Ownership/director confirmation or registry extract.
- Explanation of business activity if registered activity differs from requested goods.

7. Preliminary recommendation

If the shipment involves ordinary non-sensitive goods and the end user is clear, proceed only after normal documentation and complete restricted-party screening are finished.

If the shipment involves electronics, telecom, automation controls, chips, sensors, fiber-optic/wireless communication components, or other potentially dual-use items, pause until product classification, end-use/end-user documentation, and complete sanctions/watchlist checks are completed.

If the buyer refuses to identify end user, route, payment party, or final destination, escalate to export-control counsel before proceeding.

8. Disclaimer

This report is not legal advice, not an export classification, not a sanctions legal opinion, and not a guarantee that a transaction is permissible. It is an open-source due diligence and risk intelligence memo intended to support the exporter's internal compliance review. Final decisions should be made by the exporter with qualified export-control/sanctions counsel where appropriate.
